Federal Public Health Nurse Leadership Council Meeting

The U.S. Government's Global Health Initiative

“We will not be successful in our efforts to end deaths from AIDS, malaria, and tuberculosis unless we do more to improve health systems around the world, focus our efforts on child and maternal health, and ensure that best practices drive the funding for these programs.”—President Obama, May 5, 2009

Urgent Global Health Needs Remain

- HIV/AIDS: 33.4 million people live with HIV/AIDS globally; in 2008, 2 million people died of HIV/AIDS and nearly 3 million were newly infected.
- Child Mortality: Nearly 9 million children die in the developing world every year; approximately 2/3 of these deaths are from preventable causes.
- Maternal mortality: 530,000 mothers die in the developing world each year; every minute, a woman dies from complications related to pregnancy or childbirth and 20 more suffer injury, infection or disease.
- Tuberculosis: 1.8 million people die from TB and 9.4 million people are newly affected each year, of which 440,000 TB cases are multi-drug resistant.
- Malaria: 900,000 people die of malaria and 300 million people are newly infected annually.
- Neglected Tropical Disease (NTDs): 1 billion people are affected by NTDs.
- Unintended Pregnancy: 52 million unintended pregnancies occur annually.
- Under-nutrition: 200 million children under the age of five, and 1 out of 3 women in the developing world are suffer from under-nutrition.

Global Health Initiative Principles

- Support country ownership and invest in country-led plans.
- Implement a woman and girl-centered approach – to both improve health outcomes for women and recognize that women are central to the health of families and communities.
- Increase impact through strategic coordination and integration – for patients and for those involved in providing or paying for services.
- Strengthen and leverage key multilateral organizations, GH partnerships and private sector engagement – because improving health outcomes is a shared responsibility.
- Build sustainability through health systems strengthening.
- Improve metrics, monitoring and evaluation (M&E).
- Promote research and innovation to identify what works.

GH DOES NOT ...

- Establish a separate vertical program for global health;
- Move programs away from a project-based model; or
- Signal shift from existing goals and targets.

World Health Organization (WHO) Global Code of Practice

- Adopted by the 63rd World Health Assembly
 - On 21 May 2010
- Three key points
 - Voluntary Nature
 - Reflect Individual Rights
 - Focus on Health Systems Strengthening
- 2nd Code in WHO's history to be adopted
 - The 1st Code was the International Code of Marketing of Breast Milk Substitutes
 - Adopted in 1981
